

The figure displays three box plots side-by-side, representing the distribution of the variable 'number' for three categories: 'none', 'small', and 'big'. Each box plot is yellow with a black median line. The y-axis represents the 'number' values, ranging from 0 to 100. The 'none' category has a median around 10, 'small' around 25, and 'big' around 40. All three distributions are right-skewed, with many outliers represented by open circles above the whiskers. The 'small' category has the most outliers, extending up to 100.
